The amendment received 2/16/07 and the IDS received 2/20/07 have been entered and claims 1-22 are currently pending in this application.

A search reveals preventing or treating infection by *Shigella flexneri* with STI571 is novel.

This application contains claims 1-6 drawn to an invention nonelected with traverse in Paper No. 5. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claims 7-22 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for preventing or treating *S. flexneri* with STI571 in cell culture, does not reasonably provide enablement for treating any pathogen with any Abl tyrosine kinase inhibitor in humans. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

In claim the terms "a pathogen" and "an inhibitor of Abl tyrosine kinase" lack enablement as it would require one of ordinary skill in this art undue experimentation to determine which such pathogen or inhibitor would work in the instant invention.

The entire scope of the claims has not been enabled because:

1. Quantity of experimentation necessary would be undue because of the large proportion of inoperative pathogens or inhibitors claimed.
2. Amount of direction or guidance presented is insufficient to predict which pathogens or inhibitors encompassed by the claims would work.

Art Unit: 1657

3. Presence of working examples are only for a single specific pathogen and inhibitor in cell culture and extension to other pathogens or inhibitors has not been specifically taught or suggested.
4. The nature of the invention is complex and unpredictable.
5. State of the prior art indicates that most related pathogens and inhibitors are not effective for the claimed functions.
6. Level of predictability of the art is very unpredictable.
7. Breadth of the claims encompasses an innumerable number of pathogens and inhibitors.
8. The level of one of ordinary skill in this art is variable.

In re Wands, 858 F.2d 731, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988)

Applicant's arguments filed 2/16/07 have been fully considered but they are not persuasive.

Applicants argue that there is a presumption that the invention can be practiced as claimed. And the invention is applicable to other pathogens as well.

It is the examiner's position that no credible evidence is presented to show that any such inhibitor will be effective to prevent or treat any infection., viral, bacterial, or other pathogen in humans.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
